

Prof. Kwenga Sichilongo is an accomplished analytical chemist and mass spectrometrists with over 20 years of academic, research, and capacity-building experience across Africa, Europe, and the United States. He specializes in separation science and mass spectrometry, with applications in environmental pollution analysis, metabolomics, food science, forensic toxicology, and bioanalysis. Prof. Sichilongo holds a PhD in Analytical Chemistry from Mississippi State University and has published extensively in internationally indexed journals on environmental contaminants, metabolomics, and analytical chemistry. He currently coordinates the Erasmus+ International Credit Mobility Programme between the Slovak University of Technology in Bratislava and the University of Botswana. Within the RECLAIM Project, he contributes to postgraduate supervision and leads the development of environmental data analytics components for the AI-driven Learning Analytics Dashboard, supporting EU–Africa scientific collaboration and innovation.
